

## SEED TECHNOLOGY

### DESCRIPTION

Fine Fescue Links Blend is a combination of three different varieties of elite fine fescues designed to adapt well in northern areas. It works well in many applications on golf courses and in natural low maintenance turf areas. Fine fescues persist well in both shade and full sun, can survive with limited watering and will grow in soils that are droughty, acid and infertile.

Spartan II Hard Fescue is one of the best hard fescues available on the market today with high quality ratings from NTEP. It has excellent disease resistance, winter hardiness and close mowing tolerance. It creates an attractive turf with a medium dark green color and very fine leaf texture.

Jasper II creeping red fescue is a strong spreading variety with 2n-56 chromosomes. It has a dark green color with a very fine leaf texture and maintains excellent turf density. Jasper II has excellent winter hardiness and close mowing tolerance but can be used as an attractive ground cover with infrequent mowing.

Quatro sheep fescue is an extremely fine bladed bunch grass that produces an exceptionally dense sward and a distinct deep green colored turf. Quatro is slow growing, and is very stress, drought and shade tolerant. It is perfect for environmentally sensitive sites since it requires little or no fertility and has low water requirements after establishment.

### FORMULA

50% Spartan II Hard Fescue  
20% Jasper II Creeping Red Fescue  
30% Quatro Sheeps Fescue

### SEEDING RATE

5 - 7 lbs. per 1,000 sq. ft.  
225 - 325 lbs. per acre
