

Reinders Grass Seed

GENERAL 30 LAWN SEED MIX

SEED TECHNOLOGY SHEET

Description

Reinders General 30 Lawn Seed Mix will give a satisfactory performance on areas where economy is more important than aesthetics. The annual and perennial ryegrasses provide rapid germination and soil stabilization until the other grasses in the mixture develop. Kentucky Bluegrass produces a well-knit sod and withstands moderate traffic. Creeping Red Fescue provides good ground cover at low maintenance levels and adds shade tolerance to the mixture. This mixture provides a functional ground cover that will persist on a long-term basis and require a minimum of maintenance.

Formula

18% Kentucky Bluegrass Standard
12% Named Kentucky Bluegrass
40% Creeping Red Fescue
10% Wicked Perennial Ryegrass
20% Annual Ryegrass

Recommended Seeding Rate

New Seeding: Rotary or Drop Spreader
150-200 lbs/acre
Overseeding: Slicer/Seeder
20%-50% existing cover
100-125 lbs/acre
50%-75% existing cover
75-100 lbs/acre
Seed Depth: 1/8" to 1/2"

Recommended Use

General 30 Lawn Seed Mix is designed for new seedings of large areas where initial cost must be kept low and where elite turf quality is not required. Major areas of use include school grounds, parks, cemeteries, highway roadsides, and utility turf areas. This mixture is not recommended for use in situations subject to intensive cultural management or traffic.

Recommended Maintenance

Maximum density, drought tolerance and resistance to weed encroachment are achieved with a mowing height of 2 to 3 inches and 1 or 2 annual fertilizations. This mixture will provide functional ground cover when fertilized less frequently. It is recommended that this mixture not be fertilized more than twice per season.
