

Spectrum

CREeping BENTGRASS

DESCRIPTION

Spectrum (LNS 19) is the latest and greatest of the “NEW” generation of creeping bentgrasses being developed at Rutgers University by world renowned bentgrass breeder, Dr. Stacy Bonos. Spectrum is the leading choice for golf courses that demand the highest turf quality and greatest resistance against a range of stresses. This variety is at the top of its class for Dollar Spot resistance, spring green up, traffic and wear tolerance in addition to overall turf quality. Optimal shoot density, pleasing bright green color and an upright growth habit make Spectrum the perfect choice for INTERSEEDING into older, under-performing bentgrass greens. Spectrum’s ability to maintain higher turf density and fine leaf texture in ALL seasons provides a smoother, better putting green surface and resistance to Poa Annua invasion. Spectrum’s elite characteristics will provide an unmatched experience for all!

APPLICATION

Golf course greens, tees, and fairways
Interseeding into older, under-performing bentgrass greens

GEOGRAPHICAL ADAPTATION

Cool-season and transition zones

SEEDS PER POUND

~6,000,000

SEEDING RATE

Interseeding: 0.5-1 lbs/1,000 sq ft
New seeding: 1.5-2 lbs/1,000 sq ft

NTEP DATA

FEATURES & BENEFITS

- Superior disease resistance to Dollar Spot, Brown Patch & Anthracnose—less fungicide use equals money savings
- Excellent mowing qualities & very fine leaf texture for a cleaner, tighter & smoother putting surface
- Exceptional ability to maintain high turf density all year long for increased resistance to Poa Annua invasion
- Improved traffic tolerance against foot & cart wear
