

NETAFIM™ PE PIPES

POLYETHYLENE PIPES, TUBES AND MICRO-TUBES

APPLICATIONS

For use in agricultural irrigation systems, water delivery systems, sprinkler and micro-sprinkler stands, assembly dripper sets and automation application.

SPECIFICATIONS

- Standard irrigation pipes, produced according to SI 8779 that fit the International Standard ISO 8779.
- Tubes and Micro-tubes 3*5, 4*6.5, 6*8 and 9*12, produced according to Netafim™ quality standards for drippers, sprinkler and micro-sprinkler stands.
- Micro-tubes 8mm, produced according to Netafim™ quality standards for hydraulic command and automation systems.

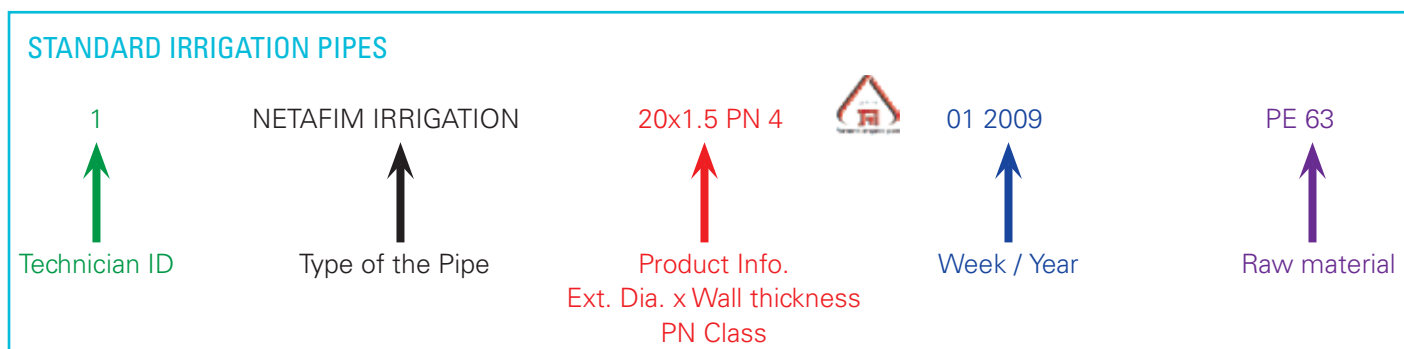

FEATURES AND BENEFITS

- All pipes are manufactured with UV and oxidation protection making them durable to solar radiation without significant damage for at least 50 years.
- Microorganisms or fungi do not attack PE pipes, either internally or externally.
- PE pipes are resistant to saline water, acid or alkaline solutions (excluding highly concentrated solutions) and to most substances employed in agricultural applications.
- Available in standard coil lengths, large diameter reels or pipe rods, to meet specific requirements.
- Made with the finest available low/medium density polyethylene resin, especially formulated to resist cracking and kinking, and to ensure long-term reliability.
- Precision manufacturing to ensure the uniformity of internal diameter and wall thickness.

MARKING

Each pipe can be identified by its external diameter and by its class (2.5, 4 or 6).

On each 1 meter of the pipe there is a mark that represents the following:
