

Complete snow mould control is here.

Winter weather is very unpredictable, so keeping a course well-protected during the winter months is a top priority for superintendents. Instrata™ fungicide changes all that. Instrata is the foremost product for protection against pink and grey snow mould. Its combination of 3 active ingredients is uniquely capable of outperforming conventional snow mould products and tank mixes.

- Powered by three separate active ingredients to promote efficacy
- Protection through contact and systemic activity
- Contains Weatherstik™ for winter longevity
- Easy to use formulation

Complete control of snow mould

In cold climates with a short golf season, it is imperative that a course is playable as early as possible in the spring. Instrata helps ensure early play. Instrata will help you to achieve the total snow mould control you need so that the course opens on time, in excellent condition. For optimal results, there are a few guidelines to keep in mind:

Instrata snow mould prescription

For control of grey snow mould (*Typhula incarnata*, *Typhula ishikariensis*) and pink snow mould/fusarium patch (*Microdochium nivale*).

- Apply 300 ml per 100 m²
- 1 case will treat 1.17 acres
- For greens, apply 8L of water per 100 m² or 2 gal/1000 ft²
- For fairways and tees, apply 4L of water per 100 m² or 1 gal/1000 ft²
- Apply after last mowing, while plants are still metabolizing and before permanent snow cover.
- Go in clean with a fall treatment of Heritage MAXX

Proven Performance in intensive testing

- 6 years testing in the USA
- 2 years in the field in the USA
- 3 years tested in Canada

Unique formulation for superior results

Instrata is specially formulated to maximize the efficacy and residual of the three active ingredients as they control snow mould. It combines suspended particles (chlorothalonil and fludioxonil) and a microemulsion (propiconazole) to yield a one-of-a-kind formulation: a suspomicroemulsion. With three active ingredients in this optimized formulation, Instrata is uniquely capable of delivering the snow mould control you need.

Achieve the total snow mould control you need

A: Untreated B: Instrata 300 ml/100²m
Summit Golf & Country Club, April 9, 2008

A: Untreated B: Instrata 300 ml/100 m² C: Standard Club de Golf Rivermead Application: Nov 8, 2007
Evaluation: April 18, 2008 148 days of permanent snow cover (from Nov 21 - April 15)

New Active Ingredient

Instrata contains, fludioxonil, a new fungicide with contact activity that has shown great efficacy against snow mould. Fludioxonil is a perfect compliment to the other strong snow mould chemistries.

Enjoy a winter without worry

Instrata takes the uncertainty out of snow mould protection. Instead of trying to predict the proper tank mix for potential pathogens and particular weather conditions, superintendents now have a stress-free way of controlling pink and grey snow mould. It is the three-way product a superintendent needs - so the course is the ultimate in playability in the spring.

Complete snow mould control

- Superior to standard tank-mix
- Multiple modes of action
- Convenient and easy to use
- Consistent and reliable results
