

# Storm Wet Soil Wetter

## ***“Tournament Conditions Every Day”***

Storm Wet treated soils will return to top condition quicker and improve overall drainage and playability.

- Prevent and mitigate LDS (localized dry spot) hydrophobicity on greens and tees
- 30 day Water Repellency and LSD prevention
- Dew Suppression for 5 to 10 days (weather dependent)
- Subsurface water tension reduction
- Extremely Low phytotoxicity potential on close cut turf (greens)

### ***Formulated with SST – System Stack Technology***

System Stack Technology- specific surfactant system technologies stacked in unison designed to: surround, encapsulate and penetrate hydrophobic soil particles,

#### **Improves:**

- soil water penetration,
- subsurface water tension reduction,
- surface dew reduction technology .

All these unique surfactant technologies “System Stacked” within the product to yield the best performing product available.
