

HERE'S WHY YOU SHOULD AERATE YOUR LAWN

For a beautiful, healthy lawn you need to get air, water and nutrients down through thatch and soil and into the root zone. Aeration makes this possible.

AERATION

Aerators punch holes or slice through the turf and thatch and into the soil to reduce compaction and allow healthy circulation of air, water and nutrients.

When and how often should I aerate?

Most lawns benefit from annual aeration. Heavily used lawns, or those growing on heavy clay or subsoil, may need aerating more frequently.

Aerate during seasons when grass is under less stress, but actively growing to allow turf to fill in the open spaces where the soil plugs were removed.

Aeration soil plugs

BENEFITS

What are the long-term benefits?

Aeration has a long list of benefits:

- Enhancing water absorption
- Improving fertilizer effectiveness
- Reducing water runoff and puddling
- Improving turf cushioning and resilience
- Enhancing heat and drought stress tolerance
- Improving overall air exchange
