

SUBMERSIBLE POND FILTER

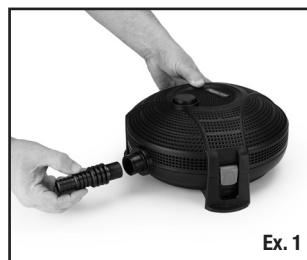

Submersible Pond Filter
Item #95110

Instructions

STEP 1

- Carefully unpack all contents from the box. Thread the multi-hose adapter into the intake of the Submersible Pond Filter. Do not use tools to attach the fittings; fittings need to be hand-tightened only (Ex. 1).

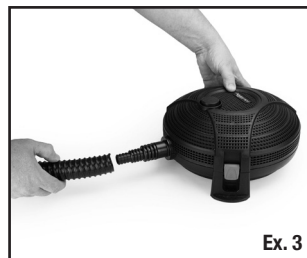

STEP 2

- Remove the filter media from all packaging, then rinse the sponge and ceramic rings to remove dust created during transport. Once rinsed, place the filter media into the filter (Ex. 2) and secure the lid.

STEP 3

- Connect a section of pipe/tubing (not included) from the filter to the intake of a compatible pump (not included) (Ex. 3). The Submersible Pond Filter is compatible with pumps up to 1,250 GPH. We recommend the Ultra 1100 Water Pump (#91008) for ideal flow and filtration.

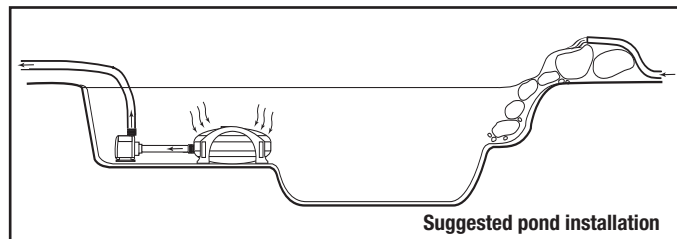

STEP 4

- Place the pump and submersible filter into the pond (Ex. 4).

STEP 5

- Plug the pump into an external GFI-rated electrical outlet and enjoy the crystal-clear water the Submersible Pond Filter provides (Ex. 5).
