

Lawn Starter™ Pro - Turf Establishment Mulch

**The only granular mulch
that keeps soil, seed and
fertilizer in place –
even when it rains**

Lawn Starter™ Pro

Holds Seed	Keeps soil, seed and fertilizer right where you left it, even if it rains
Easy to Use	Easy to store and handle. Can be applied with a broadcast spreader
Saves Time	Simply apply with a spreader and you are finished. No mess to clean up, or stakes to install
Saves Money	Has double the coverage of other granular mulches
Water Guide	Visible watering guide eliminates the guesswork by telling you when to water

+ AST® – Advanced Soil Technology™

AST® is a biodegradable polymer blend that acts like a net over your jobsite to hold soil, seed and fertilizer in place, even after it rains.

Lawn Starter™ Pro - Turf Establishment Mulch

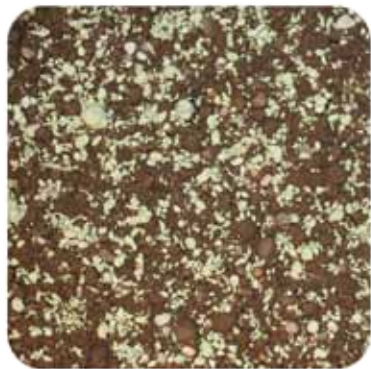

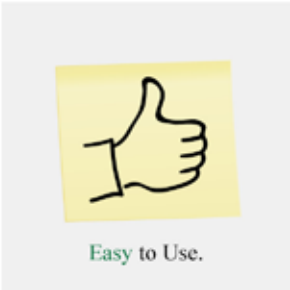

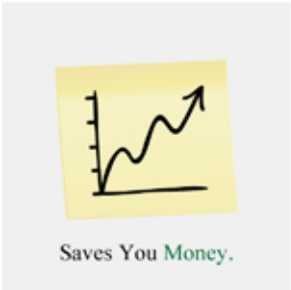

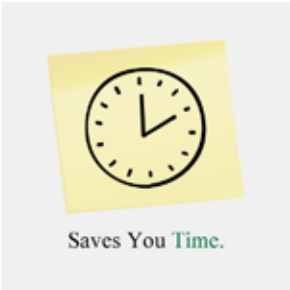

ENCAP®'s Lawn Starter™ Pro is a granular mulch that can be applied with most broadcast spreaders. The granules are made from recycled paper and contain ENCAP®'s proprietary blend of soil stabilizing polymers. The polymers are designed to improve soil conditions and keep seed, soil and fertilizer right where you put them, even after it rains. The polymers also help to condition the soil by creating micro channels that help to get water and nutrients into the root zone. This improves germination and overall seed establishment.

All of this in a product that is clean and easy to use. ENCAP®'s Lawn Starter™ Pro is fast and easy to apply with no cleanup saving you time, money and labor. Lawn Starter™ Pro is the earth – friendly choice of landscape professionals.

Application Rates

Slope	Lbs / 1,000 ft ²
No Slope up to 4:1	25 - 50
> 4:1 Slope	Use Slope Keeper or PAM-12® Plus

Please Note:

- Application rates and methods may vary based on site conditions such as slope, soil type, physical state and chemical properties of the soil and time of year
- Application rates may vary based on desired visual appearance
- Lawn Starter™ Pro granules are activated by natural or applied moisture
- It is recommended that seeding be completed prior to applying Lawn Starter™ Pro. Seed needs to be in direct contact with the soil on a well prepared seed bed
