

VLO 12V LED Underwater Accent

One light, three lumen levels.

Our VLO Underwater Accent fixture is equipped with the Lumen Effects System, which allows you to easily switch between three lumen outputs: 100, 200, or 400, with the use of the Magnetic Key. Its field configurable design allows for customization based on the needs of the application.

Variable Lumen Output (VLO) Adjustment		Lumens
Level 1	Flashes one time	100 lm
Level 2*	Flashes two times	200 lm
Level 3	Flashes three times	400 lm

**Factory setting*

VLO 12V LED Underwater Accent with Lumen Effects System makes designing and modifying landscape lighting easier.

Lumen Effects System eliminates the need to mechanically adjust or open the fixture, providing better longevity on the life of the product.

Flexible Lumen Levels allows you to set and adjust the lumen levels as the landscape needs change.

Sealed and fully encapsulated to safeguard from water ingress and the outdoor elements – helping to extend the life of the product.

Versatile IP68 rated design allows you to install underwater or in locations near water, such as rock beds, decks, or pergolas.

Safe for use with aquatic wildlife and virtually any water areas with its Marine Grade 316 Stainless Steel, corrosion-free housing.

4,000-volt system surge protection protects against power surges and irregularities, especially when paired with one of our transformers.

FIXTURE

Glass Lens

Tempered, shock resistance glass with high tolerance for thermal expansion and stress.

Body

Marine Grade 316 Stainless Steel.

Wire

18 AWG, 105°C, 300V, 25' usable length, SJTW or SJOW.

Optics

Custom acrylic optics provide smooth, uniform light distribution to eliminate glare and hotspots.

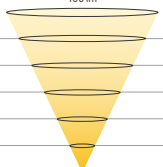

Included Accessories

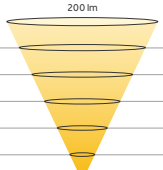

Removable 316 Stainless Steel Masonry Bracket and Cowl, 2 gel-filled Wire Nuts, and Adjustment Key.

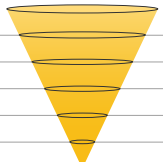

Optional Weighted Mounting Base 16084BK.

TROUBLE SHOOTING

Fixture does not illuminate	Verify power connections. Review installation guide for installation problem. Insure manual reset breaker has not been tripped.
Fixture flashes	Verify load calculations for the installation. Check voltage at affected fixture. Verify you are on 15V output tap.
Fixture turns off	Verify power connections. Review installation guide for installation problems. Insure manual reset breaker has not been tripped. Check voltage drop at fixture.
Fixture trips breaker	Check installation for a possible short or overload state. Isolate the identified short and replace affected fixture or remove fixture(s) installed in overload.
Fixture returns to original lumen output	The fixture has to be powered on for 2 minutes after final adjust to exit programming mode.

DISCLOSURE

1. Chip binning ranges: (2700K 80+ CRI: 3 step), (3000K 80+ CRI: 3 step). LED chip data measured in accordance to IES LM-80.
2. Fixture has a 90% confidence luminous flux range to stated 3000K CCT target. Photometric (flux and color) data has been measured in accordance to IES LM-79.
3. Actual efficacy value can be calculated as follows: Lumen value divided by average power consumption.
4. Do not extend beyond the recommended maximum run length.
5. Recommend product be installed with 10 or 12 gauge wire.
6. Recommend 80% load/20% overhead rule for fixture load planning in reference to the power source. Calculating fixture loading this way provides additional resource for fixture adjustment and loss due to voltage drop due to wire run lengths.
7. We reserve the right to modify and improve the design of our fixtures without prior notice. We cannot guarantee to match existing installed fixtures for subsequent orders or replacements in regards to product appearance, CCT, or lumen output.
8. Do not modify product beyond instructions or warranty will be void.
