

Launch® Dry Plant Nutrient Supplement

Nutrients for the establishment and maintenance of turf and ornamentals

WHAT IT IS

Launch® Dry Plant Nutrient Supplement provides nutrients for the growth and development of roots in seeding, sodding, or sprigging operations for establishment of dense turf. Launch is formulated with potassium, cold-water kelp extract, humic and fulvic acids, and homogenized and deodorized liquid manure, and contains chelated iron and an advanced surfactant to help generate a strong, vigorous root mass and a stand of dense, hardwearing turf. It's ideal for hydroseeding and pre-germination operations, and Launch is labeled for athletic fields, residential lawns, and golf course greens and tees.

WHAT IT DOES

Launch Dry:

- Provides nutrients for root growth and development
- Promotes density and wear resistance
- Ideal for hydroseeding
- Easy-to-spread granule formulation
- Contains surfactant

Labeled for use on:

- Athletic fields
- Residential lawns
- Golf courses
- Annual and perennial flower and ornamental beds
