### **SPECIFICATIONS**

	OS901SPHD
Engine: HP'	9.0 HP (6.7kW)
Engine: Model	GX270UTQA2
Engine: Type	Honda
Engine: Fuel Capacity	5.6 qt. (5.3 L)
Engine: Oil Capacity	1.16 qt. (1.1 L)
Total Unit Weight:	323# (147 kg)
Max. operating slope	20°

### **SAFETY**

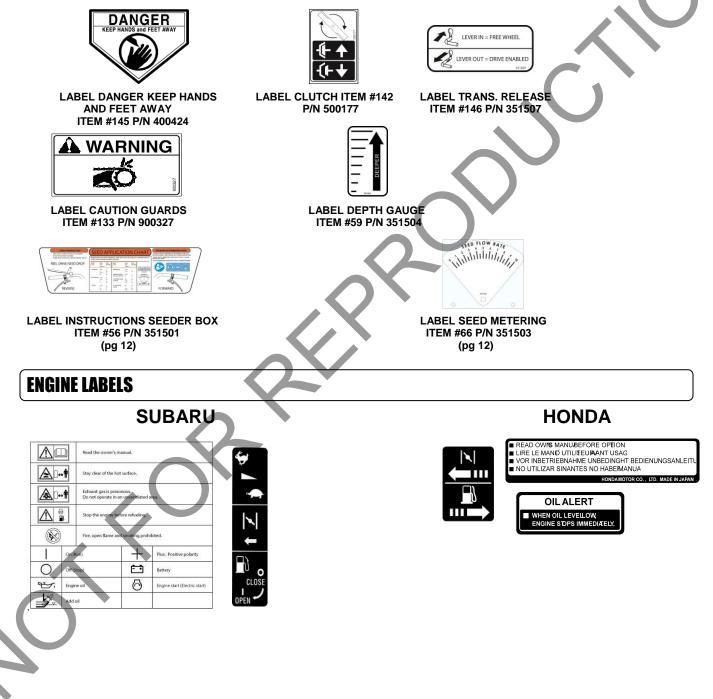

This product can expose you to chemicals including gasoline engine exhaust, which is known to the State of California to cause cancer, and carbon monoxide, which is known to the State of California to cause birth defects or other reproductive harm. For more information go to www.P65Warnings.ca.gov.

### **INSTRUCTION LABELS**

The labels shown below were installed on your BILLY GOAT<sup>®</sup> Overseeder. If any labels are damaged or missing, replace them before operating this equipment. Item numbers from the Illustrated Parts List and part numbers are provided for convenience in ordering replacement labels. The correct position for each label may be determined by referring to the Figure and Item numbers shown.

### **PACKING CHECKLIST**

Your Billy Goat Overseeder is shipped from the factory in one carton.

**READ** all safety instructions before assembling unit. **TAKE CAUTION** when removing the unit from the box, the Handle Assembly is attached to the unit and cables could snag.

DUT OIL IN ENGINE BEFORE STARTING

□ Parts bag P/N-351009

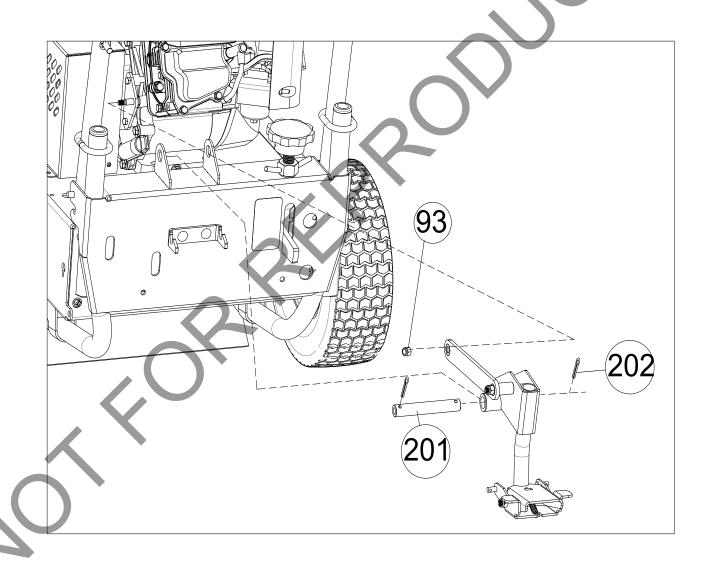

□ Foot pedal assembly

### ASSEMBLY

NOTE: Items in ( ) can be referenced in the Parts Illustrations and Parts Lists on pages 11-22.

- 1. UNFOLD the upper handle and slide handle lock loops (item 35) into place to secure the upper handle to the lower.
- 2. ATTACH the bar of the foot pedal to the bracket located on the engine. Use the lock nut (item 93) from the parts bag.
- 3. ATTACH the pedal section to the rear of the frame between the two brackets by aligning the holes and inserting the tube (item 201) from the parts bag.
- 4. TAP the two pins (item 202) into both ends of the tube installed in step 3, and using pliers, spread the cotter pins to keep it from coming out.
- 5. CHECK engine oil level and fill to proper level with engine manufacturers recommended grade of oil. Make sure to adjust the machine so that the engine is level during checking. See engine manufacturers' instruction manual.
- 6. CONNECT spark plug wire.

# **OPERATION**

NOTE: Items in () can be referenced in the Parts Illustrations and Parts Lists on pages 11-22.

#### FOLDING HANDLE

This unit is equipped with a folding upper handle for easier storage and transportation. The handle can be folded by sliding the handle lock loops (item 35) up. This releases the upper handle, allowing it to be folded over the unit.

#### ADJUSTING BLADE DEPTH

The depth of the blades can be raised or lowered by rotating the knob located at the rear of the machine. The relative depth of the blades can be gauged by using the depth scale located on the rear of the machine and the bar next to it. (See *Fig.* 1)

#### **BLADE POSITION & DEPTH CONTROL LEVER**

The blades can be raised or lowered into the ground by the height adjustment foot pedal at the rear of the unit. The blades will be in lowered position when the foot pedal is unlocked from the bracket and will be in transport position when the pedal is locked to the bracket. See *Fig.* 2 & 3 for operation. The resulting blade depth can be adjusted higher or lower.

Pressing on the outside tabs of the pedal will allow it to unlock from the bracket and lower into position. (See *Fig.* 2)

Pressing on the center of the pedal and pushing it into the bracket will allow it to be locked in transport position. (See *Fig.* 3)

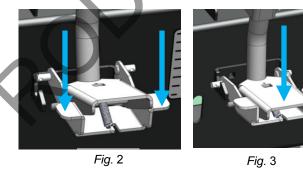

Fig. 1

#### VERTI-CUTTING OPERATION

SET DEPTH: With engine off, set the raking depth so that the blades just touch on a flat surface (i.e. driveway, or sidewalk).

<u>ENGAGE BLADES</u>: Push the Reel Lever down on the operator handle (upper left side). *NOTE*: When engaging the blades in heavy load conditions (i.e. heavy thatch, or very uneven turf), push down on the operator handle lifting the front wheels slightly. Engage the blades. Slowly lower the unit into the turf.

<u>SLICE</u>: Verti-cut a small test area and examine the results. Some thatch and cut stems should be removed and deposited on top of the healthy grass. Grass runners should be cut and ready for removal. If excessive damage occurs to healthy grass, adjust the blade depth to decrease damage. Continue raking the yard, working in one direction (i.e. north-south, or east-west). *NOTE:* If a large drop in engine RPM occurs, or bounces during operation, the blade depth is set too low.

<u>REMOVE THATCH/STEMS</u>: After verti-cutting, a layer of thatch and cut stems will be deposited over the top of the lawn. We suggest the use of a lawn vacuum or wheeled blower for collection and removal of the thatch/stems.

#### OVERSEEDING OPERATION

DRY: Be sure grass is dry. Wet conditions can cause increased damage to healthy grass.

<u>SEED</u>: Spread grass seed according to the seed suppliers directions (e.g. 10 lbs. per 1000 ft<sup>2</sup> [4.5 kg. per 93 m<sup>2</sup>]) Adjustments to the seed drop is located on the front of the unit on the seed dial and should be used in conjunction with the seed chart on the console.

SET DEPTH: With engine off, set the raking depth so that the blades reach 1/4"-1/2" (6-12 mm) below a flat surface (i.e. driveway, or sidewalk).

ENGAGE REEL AND SEED DROP: Push down on the reel lever on the operators handle. *NOTE*: When engaging the reel in heavy load conditions (i.e. heavy thatch, or very uneven turf), push down on the operators handle lifting the front wheels slightly. Engage the reel. Slowly lower the unit into the turf.

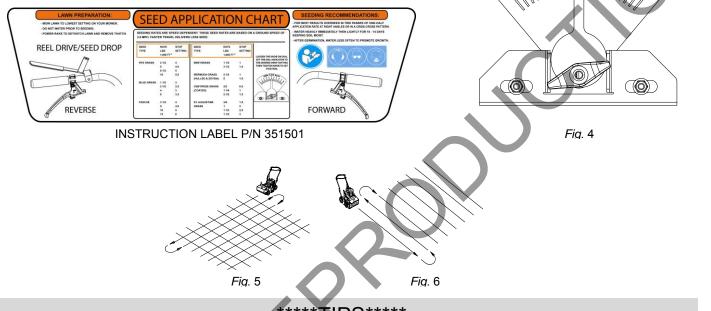

<u>SLICE</u>: Run machine over the area that has been seeded to incorporate the seed into the soil. If excessive damage occurs to healthy grass, adjust the blade depth to decrease damage. Continue raking the yard, working in one direction (i.e. north-south, or east-west). *NOTE*: If a large drop in engine RPM occurs, or bounces during operation, the blade depth is set too low.

WATER/FERTILIZE: After the seed has been worked into the soil, water and fertilize according to the seed supplier's directions.

## **ADJUSTING SEED RATE**

To set the seed flow rate, loosen the knob on the indicator dial and turn it to the corresponding stop setting on the seed application chart (below or on the console) for the type and amount of seed being used. (See *Fig.* 4)

\*\*\*\*\*TIPS\*\*\*\*\*

Before beginning, it is best to evaluate the condition of the lawn by cutting one or more core samples from area to be treated. A core can be cut using a piece of PVC, or metal pipe. Hammer the pipe into the ground, remove it, push the core out of the pipe and inspect it to determine the depth of thatch in your yard.

#### MOW

Mow the lawn to its normal cut height. Be sure grass is dry. Wet conditions can cause increased damage to healthy grass.

#### INSPECT

Check the lawn before beginning work. Remove all rocks, wire, string, or other objects that can present a hazard during work.

#### IDENTIFY

Mark all fixed objects to be avoided during work, such as sprinkler heads, water valves, buried cables, or clothes line anchors, etc.

#### THATCH

Thatch is a dense layer of dead grass, clippings, and roots that builds up over time at the base of the lawn preventing air, water, and fertilizer from reaching the soil. This can cause shallow root development and make a lawn more susceptible to drought and disease. Thatch also provides an ideal environment for insects to hide and multiply. Periodic removal of thatch will keep your lawn in good health.

#### HEAVY THATCH

Lawns with an excessive amount of thatch will require multiple treatments for effective removal. Trying to remove excessive thatch (greater than 3/4"[19 mm] deep) in one treatment will damage or destroy the living part of the lawn. It is best to remove heavy thatch in seasonal treatments (i.e. spring, and fall).

#### SLOPES

Rake slopes across not up and down the slope. This is much easier and safer for the operator and is better for the lawn. Raking across will help to reduce runoff during watering and allow the sloped ground to hold more seed, fertilizer, and water. The unit's maximum operating slope is 35% or 19°.

#### DEPTH

The wide range of depth adjustment on your unit is provided to allow for blade wear. Setting the reel deeper will not produce better results. The flail reel is intended to be set so it just touches the surface on flat ground. The slicing reel should be set even with the ground for vertislicing work, and set to a maximum 1/2" depth for overseeding. Setting the reel deeper will only result in premature wear on the unit (i.e. failed belt). If you desire to work the ground deeper than the above guidelines, it should be done gradually in multiple passes.

**SLICING / OVERSEEDING:** Mow the lawn to shorter than the normal cut height before starting (i.e. approximately 2" tall for fescue grass). For the best result, slice/overseed in single pass pattern (See *Fig.* 5 & 6).

FIOW

### MAINTENANCE

NOTE: Items in () can be referenced in the Parts Illustrations and Parts Lists on pages 11-22.

#### PERIODIC MAINTENANCE

Periodic maintenance should be performed at the following intervals:

Maintenance Operation	Every Use (daily)	Every 25 Hours
Inspect for loose, worn or damaged parts		•
Check engine oil	•	
Inspect belts		
Engine (See Engine Manual)		
Grease bearings		•
Inspect and clean engine air filter	•	
Oil height adjustment linkage		•

#### SLICING BLADE WEAR

- 1. Wait for engine to cool and disconnect spark plug.
- 2. Close fuel valve on engine (if available).
- 3. Lean unit back onto lower handles and secure in place.
- 4. Inspect blades for wear and immediately replace any deformed or cracked blades. Measure the overall diameter of the blade.
- 5. If blades are warped or are no longer sharp, they must be replaced. *NOTE*: We recommend replacing all the blades at once.

#### ENGINE BELT REPLACEMENT

- 1. Wait for engine to cool and disconnect spark plug.
- 2. Place the rear of the unit on blocks.
- 3. Remove the right rear tire (item 11) and spring (item 155) attaching the housing to the frame.
- 4. Remove three screws (item 114) holding the belt guard (item 19) in place.
- 5. Remove the four screws (item 107) holding the mule drive assembly (item 60) in place.
- 6. Remove the belt (item 14) by rotating the mule drive pulley and walking it out of the groove, and remove the mule assembly leaving the belt on the transmission.
- 7. Remove the carriage bolt and nuts holding the right bearing on the jackshaft. Do not remove the bearing and pulley.
- 8. Remove the belt guard (item 58) by removing the three screws (item 114).
- 9. Walk the belt off of the crankshaft pulley, and then slide it down the jackshaft to the bearing hole. This will allow the belt to be slid around the mule pulley.
- **10**. Replace the belt by feeding it into the hole and around the pulley where the old one was removed. Make sure it is seated in the jackshaft pulley and then walk it onto the crankshaft pulley making sure it is inside the belt fingers.
- 11. Reattach the bearing and tighten the hardware securely.
- 12. Reattach the mule drive and belt, making sure that the belt is seated properly in the transmission pulley and the mule drive assembly.
- Check the idler tension on the belt when the drive lever is engaged, if it is too loose, the spring (item 82) holding the idler arm will need to be replaced.
- **14**. Reattach the guards, tire, spring and spark plug and make sure of proper operation.

#### MULE BELT REPLACEMENT

- 1. Wait for engine to cool and disconnect spark plug.
- 2. Place the rear of the unit on blocks.
- 3. Remove the right rear tire (item 11) and spring (item 155) attaching the housing to the frame.
- 4. Remove (3) screws (item 114) holding the belt guard (item 19) in place.
- 5. Remove the four screws (item 107) holding the mule drive assembly (item 60) in place. This will allow access to the belt.
- 6. Remove the belt (item 14) by rotating the mule drive pulley and walking it out of the groove, and then sliding it off of the transmission. Discard old belt.
- 7. Install new belt using same procedure to walk the belt into the groove, making sure it is seated fully in all pulleys. Reattach the mule drive assembly.
- 8. With new belt installed, pull the drive levers up and make sure the idler pulley puts tension on the cable. The proper adjustment should have the drive lever fully engaged and the belt should be snug on the pulleys.
- **9.** Re-install the belt guard, spring, and tire, then reattach the spark plug.

#### **REEL BELT REPLACEMENT**

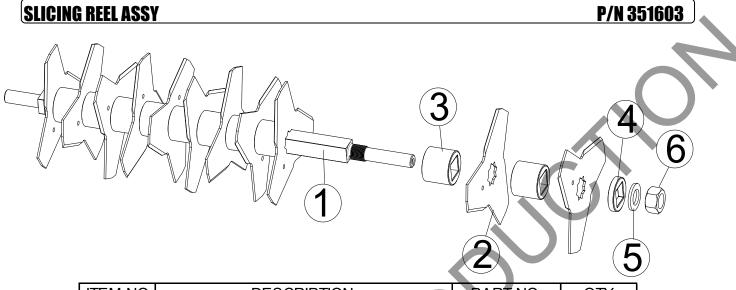

- 1. Wait for engine to cool and disconnect spark plug.
- 2. Remove two screws (item 38) holding the belt guard (item 20) in place
- 3. Remove the belt (item 17) by rotating the reel pulley (item16) and walking it out of the groove. Discard old belt.
- 4. Install new belt using same procedure to walk the belt into the groove, making sure that it is inside the belt fingers.
- 5. With new belt installed, push the reel drive lever down and make sure the idler pulley puts tension on the cable. The proper adjustment should have the blade lever fully engaged and the belt should be snug on the pulleys.
- 6. Re-install the belt guard and reattach the spark plug.

	Problem	Possible Cause	Solution
Abno	ormal vibration	Damaged or missing blades. Loose	Stop work immediately. Replace any
-		handle bolts. Loose engine bolts.	damaged or missing blades. Tighten all
			loose nuts and bolts.
Engi	ine stalls or labors when	Blades set too deep into ground.	Raise blades so that they just touch
rakir	ıg		the ground on a level surface.
Engi	ine will not start	Stop switch off (Honda only). Throttle in off position.	Check choke position.
		Out of gasoline or bad, old gasoline.	Check gasoline.
		Spark Plug wire disconnected.	Connect spark plug wire.
		Gas valve off.	Turn on gas valve.
		Dirty air cleaner.	Clean or replace air cleaner. Contact a qualified service person.
Engi over	ne is locked, will not pull	Debris locked against reel, or drive pulleys. Engine problem.	Pull spark plug wire and remove debris. Contact an engine servicing dealer for engine problems.
