

Proactin^{EX}
Express Technology

TerreplexTM
Carbon-rich Acidifier

Proactin^{EX} and TerreplexTM are the "one-two punch" that unleashes the full power of your current turfcare program.

1. **Proactin^{EX}** noticeably increases the effectiveness of your fertilizers, herbicides and fungicides; all while strengthening turf to withstand stress conditions such as heat, drought and salinity.
2. **TerreplexTM** unlocks the nutrients, such as calcium and magnesium, that are already bound and available in your soil. It's a "must use" with your surfactant; and is especially beneficial when applying granular gypsum or limestone in the fall.

Combining Proactin^{EX} with TerreplexTM provides a "one-two punch" to help revive your soil and ensure impressive, professional playing conditions.

Proactin^{EX} is a highly concentrated blend of amino acids, important vitamins and stress metabolites which has been *tested and proven* by both Rutgers University and Penn State; as well as by golf course superintendents throughout the world.

TerreplexTM is a low pH, carbon-rich solution of scientifically blended organic acids which increases the solubility of calcium and minerals bound in the soil while reducing bicarbonates. This helps maximize the absorption of these important nutrients to expedite and increase the efficacy of your turf care efforts.
