

## Guaranteed Analysis

Total Nitrogen (N) ..... 9.00%  
 .58% Ammoniacal Nitrogen  
 8.42% Nitrate Nitrogen  
 Calcium (Ca) ..... 11.00%

### Derived from Calcium Nitrate

**Calcium Nitrate** contains nutrients required for healthy, vigorous growth. Calcium is essential for cell wall formation; stimulating roots and leaf formations; and neutralizing organic acids. It regulates the uptake of other nutrients.

- Weight per gallon: 12.2 lbs. (5.5 kg)
- Each gallon contains:  
 1.1 lb Nitrogen  
 1.4 lb Calcium
- pH: 5.0 - 7.0
- Equivalent Acidity:  
 (lbs.  $\text{CaCO}_3$  per 100 lbs. N) = 129 (Basic)

# Calcium Nitrate 9-0-0, 11% Calcium

### Directions for Use:

**Greens, Tees, Fine Turf, Fairways, Roughs, Sports Turf and Lawns:** Apply 5.0 - 24.0 oz. of **Calcium Nitrate** with 1.5 - 2 gallons of water per 1,000 sq. ft. Apply 1.7 - 8.2 gallons of **Calcium Nitrate** with 66 - 88 gallons of water per acre. This application shall provide 0.04 - 0.21 lb. of actual Nitrogen per 1,000 sq. ft.

**Trees:** Foliar - Apply 3 - 5 quarts per 100 gallons of water. Soil - Apply beneath foliage inside the drip line. Water in well 1/2 pint = 8 oz. per 1" of trunk diameter measured at breast height.

**Ornamentals:** Foliar - Apply 2 - 4 qts. of **Calcium Nitrate** per 100 gallons of water.

**Soil:** Apply beneath foliage inside the drip line. Water in well 2 - 4 oz. undiluted for small ornamentals and 4 - 7 oz. undiluted for large ornamentals.

### Farm:

**Drip Trickle System:** Apply 15 gallons of **Calcium Nitrate** per Acre at early fruit set and early fruit development to supply calcium. The addition of **P.F.C.'s 10% Liquid Boron** at 1 - 2 quarts per acre would be helpful to ensure a proper Ca: B ratio.

**Side Dress Recommendations:** Apply up to 50 gallons of **Calcium Nitrate** per Acre as a side dress application. However, since Nitrate Nitrogen is subject to leaching, split applications at lower rates may be preferable.

### Greenhouse and Garden:

**Tank Mixing:** Add 1 1/2 quarts of **Calcium Nitrate** to 100 gallons of water and apply as a normal watering or at the rate of 1 quart of solution for every sq. ft. of planted surface area every 7 to 14 days throughout the growing season.

**Hozon 1:15 Ratio Proportioner:** Add 3 oz. for each gallon of water as the proper concentrate for a normal dosage of normal feeding with every watering.

**1:100 Ratio Proportioners:** Add 22 oz. for each gallon of water as the concentrate for a normal dosage of constant feeding with every watering.

**To avoid the formation of insoluble precipitates, DO NOT MIX WITH MATERIALS CONTAINING PHOSPHATE OR SULFATE. Rinse out all equipment before and after use.**
