

TreeDiaper®

So much more than a tree watering bag

Superior technology with case study after case study showing its effectiveness.

Provides irrigation, insulation and weed barrier protection all while conserving water.

Grow healthy trees while using 99% less water.

What it is doing:

Made in U.S.A.

EMBRACING MOTHER NATURE

TreeDiaper is left out year-round and refills itself with natural precipitation - both rain and snow. With 1" of rain, it will last 30 days before needing additional water

TRUE SLOW RELEASE

Lasts 30 days with no filling. Super absorbent polymers hold 500x their weight in water for unparalleled water storage and irrigation efficiency

ELIMINATES COMPETITION

Works as a weed barrier to eliminate weeds and plants from competing for water in the root zone

PROMOTES ROOT GROWTH

Irrigation is provided to an area away from the tree's trunk to a depth of 12 inches, which encourages roots to grow outward helping young trees establish

SOIL INSULATION

TreeDiaper keeps the root zone at a more consistent temperature, which helps roots thrive due to experiencing a reduction in extreme temperature and moisture level variances
